

Introducing Xecunet IBAX remote data backup for business

Regardless of fire, theft, or natural disaster it is imperative that your business has a plan to mitigate the effects of any downtime brought on by computer failure or data loss. Xecunet's IBAX remote data backup is a powerful solution that helps to protect your business and gets your organization up and running quickly and efficiently when disaster strikes.

- ✓ **Bare-metal recovery** to any platform directly from the cloud
- ✓ **File & Disk imaging** for complete backups and peace of mind
- ✓ **Physical System Backup** for Windows Servers, Linux Servers, and Windows, Mac and Linux desktop/laptop PC's
- ✓ **Support of applications** - Microsoft SQL, Microsoft Exchange, and Windows System State
- ✓ **Virtual system backup** for VMware, Hyper-V, RHEV, Linux KVM, XenServer, and Oracle VM Server
- ✓ **Initial seeding** to easily move large volumes of data to the cloud quickly
- ✓ **Elastic storage** options and per seat licensing allows you to cost-effectively scale
- ✓ **Management console** makes it easy to add workstations and servers to your backup strategy
- ✓ **Scheduled or ad-hoc reporting** gives you peace of mind that your data is being protected

Don't allow your business to become a statistic. Protect your important files and documents with Xecunet's IBAX Remote Data Backup service. Our service plans allow you to easily scale as your backup requirements increase, saving you money and time. Our intuitive, online management and reporting tools give you peace of mind that your data backups are being completed and your documents are available in the event of an emergency.

Call us at 301-682-9972 and let Xecunet assist you in getting a disaster recovery plan for your business in place.

90%

of businesses will fail within two years of a disaster
